### IN THE CLAIMS

Please cancel claims 1-15 and add new claims 16-18 as follows:

✓  
--16. A system for remote loading of objects or files in order to update software, comprising operating system architecture that includes a breakdown of various tasks into software modules that are interconnected by dynamic links or are made up of executable subroutines that have primary dependence links to other parts of the operating system, wherein each of the software modules is composed of object files or library files that are represented by dynamic link libraries that are organized between them according to a number of levels of dependence that are described in their respective attributes.--

--17. A system for remote loading of objects or files in order to update software according to claim 16, wherein the attributes of an object or a library indicate a version number and dependencies of the object with respect to other objects.--
